

WiFi Manager Supported Devices

With WiFi Manager you get the flexibility to choose access points from different vendors. It operates seamlessly with access points from Cisco, Proxim, Symbol, 3Com, Avaya, HP, and DELL and enables IT to automate configuration and maintenance functions. This enhances IT productivity as they can now rely on single console for WLAN management and also eliminates the pain of logging into multiple vendor-supplied Wireless LAN management applications.

Access Points currently supported by WiFi Manager:
